Imagine your creative design translated from paper into a full scale  
bridge, noisewall, or building that embodies your artistic concept.  
With 30 years of expertise in creating formliners, Fitzgerald Formliners  
will make that extra effort to provide you with great attention to detail  
and high quality engineering during the design phase, which will  
ensure that your aesthetic vision is reflected in the end result.

*"The cast concrete walls created with my custom formliner design, introduced a lot of interesting color, texture and art to the large area of this project, without adding a lot to our costs. From the early planning stages through fabrication, the people at Fitzgerald Formliners were really helpful, which ensured that my drawings resulted in a successful design."* ~Joan Waters, Artist
